You can make a **Local Setup**, when **Delcam FlexLM Server** and all of your Delcam Programs are installed on the same computer Or you can make a **Network Setup**, when Delcam **FlexLM Server** is installed on one network computer (SERVER) and all of your Delcam Programs are installed on other networks computers (CLIENTS)

In that case you need to create on every CLIENT's computer an Environment Variable:

DELCAM_LICENSE_FILE = 1700@ServerComputerName

Where:

1700 - is a Port (the same as in delcam.lic). Port mast be opened for connection between Server and CLIENT's computers **ServerComputerName** – is a real name (or IP-address) of computer with Delcam FlexLM Server running
